Passionate learner and teacher of the various abstraction of software, from low level hardware control for drive-trains up to ML and statistical models to interpret our ever-advancing world

VETRI VIJAY

Troy, MI | 248-843-7119

My best tools and skills:
- C/C++ Programming
- Python w/ Pandas, TF, sci-kit
- Arduino, STM32 & Linux
- Teaching & Collaboration

Experience | Not Listed: Taekwondo Black Belt & Instructor, FRC 226 Robotics Programmer, FTC 14657 Mentor

- **Data Science Intern | Magna International, Troy MI (May 2022 – Aug 2022)**
  - Created a Proof-Of-Concept for moving machine learning models to edge microcontrollers.
    - Researched various offerings of cloud and edge ML platforms, alongside deployment boards.
    - Deployed a ~95% accuracy Convolutional-NN model on a microcontroller for binary image classification.
    - Presented the research, training, and deployment process for implementation in a production environment.
  - Developed object-oriented code for seasonal trend decomposition and anomaly detection in time series data.
  - Tested data collection capability of a custom sensor board using MQTT protocol.
  - Utilized SQL in BigQuery to convert raw sensor data in GPC into a useable CSV file for data analysis.
- **Teaching Assistant | Michigan State University College of Engineering (Jan 2022 – Current)**
  - Taught CSE 232 in C++ alongside a team of instructors. Duties performed:
    - Hosting lab sections for hands on development of C++ code and algorithms.
    - Providing office hours for one-on-one guidance through assignments and answering conceptual questions, alongside maintaining instructor-student relations.
    - Managing attendance and grades for a class of ~400 students with D2L and Coding Rooms educational tools.
    - Communicating with fellow instructors about common student concerns, pacing, assignment difficulty and trends to collectively resolve any issues found.
  - Received a 9.1/10 average score on student feedback for the first semester.
- **Software Lead | Michigan State University Solar Racing Team (Sep 2021 – Current)**
  - Worked with the Driver Control System (DCS) team to update electrical boards and block diagrams.
  - Developed and managed software components for the solar car using Arduinos, CAN and version control.
    - Updated DCS software with new I/O and functionality based new hardware and electrical board upgrades.
    - Created new software and startup sequence for the power distribution board's Arduino.
    - Deployed CAN to communicate between motor controllers, Arduinos, and infotainment systems.
- **Software Engineering Intern | DM3D Technologies, Auburn Hills MI (Jun 2020 – Aug 2020)**
  - Collaborated with machine designers to develop software which cut down the time required to complete the following tasks involving Direct-Metal-Deposition (DMD) additive manufacturing:
    - Monitoring and displaying live data feeds from operating machinery with statistical inferences.
    - Collecting data from post-production parts and generating reports of specific parameters.
    - Inspecting DMD printed parts through a specialized visual application to replace time-consuming alternatives.
  - Produced thorough user manuals for the software developed for improved operation and maintainability.

Education | Relevant Coursework: Data Structures & Algorithms, Calculus 1-4, Statistics, Matrix Algebra, Discrete Math

- **Michigan State University** | B.S in Computer Science | 3.65 (**Sep 2020 – Expected Dec 2023)**
- **Troy High School** | High School Diploma | Class of 2020 **(Sep 2016 – May 2020)**

Technical Skills

- Python
- Machine Learning
- Statistical Analysis
- Data Visualization
- BigQuery/SQL
- C/C++
- Embedded Systems
- ARM64 Assembly
- Visual Basic .NET
- LabView
- Version Control
- HTML/CSS/JS
- Java
- CAN Bus

Soft Skills

- Leadership
- Innovation
- Critical Thinking
- Teamwork
- Time Management
